

# How Decorators Work

- ◆ This:

```
@decorator  
def some_function(): ...
```

- ◆ is the same as this:

```
def some_function(): ...  
some_function = decorator(some_function)
```

# A Decorator Is A Function

- ◆ It's a function that creates a new function from an old function

```
def decorator(function: Callable) -> Callable:  
    details go here
```
