

Callable Objects

```
class Engine:  
    def __call__(self, tach):  
        return 0.7724*tach**1.0134  
eng = Engine()
```

Step-by-Step

1. Define a class
 - ◆ Must implement **__call__** method
2. Create an instance of the class
 - ◆ This is the callable object
 - ◆ Similar to a **def**, but...
