

Kind of Like This

```
def eng(r: float) -> float:  
    return r/1.4  
table = []  
for tach in range(800, 3200, 200):  
    table.append( (tach, eng(t)) )
```

Can save this as CSV to format and print

Difficult to Extend

Awkwardly Long

Tach	800:	Actual	571.4285714285714
